

Thoracic Outlet Syndrome Surgery in San Antonio at UT Medicine San Antonio

Patients with thoracic outlet syndrome (TOS) can now be evaluated and treated in San Antonio by UT Medicine's expert vascular surgeons, Dr. Taylor Hicks and Dr. Matthew Sideman.

Thoracic outlet syndrome is caused by a compression of the nerves, arteries or veins in the thoracic outlet. It is typically congenital but can also be caused by trauma, repetitive movement during work or sports, poor posture, or tumors. Often, a patient's symptoms are misdiagnosed as angina, nerve disorders or arthritis.

Refer your patients who are experiencing ongoing or progressive arm and hand symptoms such as pain, fatigue, numbness, tingling, swelling or sores which have not healed through conservative treatment.

We provide fast scheduling and prompt reporting. For referrals or to speak with
UT Medicine's thoracic outlet syndrome experts, please call
